

LIVEN. The New Classic.

Liven

The LIVEN is the crown jewel in Bristol's range of executive office chairs.

It's not just a functional masterpiece that has an ideal blend of modern elegance and comfort, but a sophisticated statement for the discerning few that not only sit on the most important chair within empires they have built.

For big dreamers who are intensely passionate and fearless. An iconic personality that is bold and confident and demands the best and the finer things in life. He is the modern gentleman who knows only extraordinary thinking will change the world in epic ways.

Design Team,
Albott Design Studio

Its appearance is all about classical design and clean lines. The uncompromisingly level of details and comfort is what set the Liven chair apart.

All individual components are designed for maximum functionality and longevity. The distinctive shape of the armrests are produced in high quality die-cast aluminium finished off in chrome or polished finish.

The Liven chair accentuates the prestigious interior of an executive room.

Its bold characteristic reflects the true values of the person sitting on it while creating a harmonious integration with the executive desk.

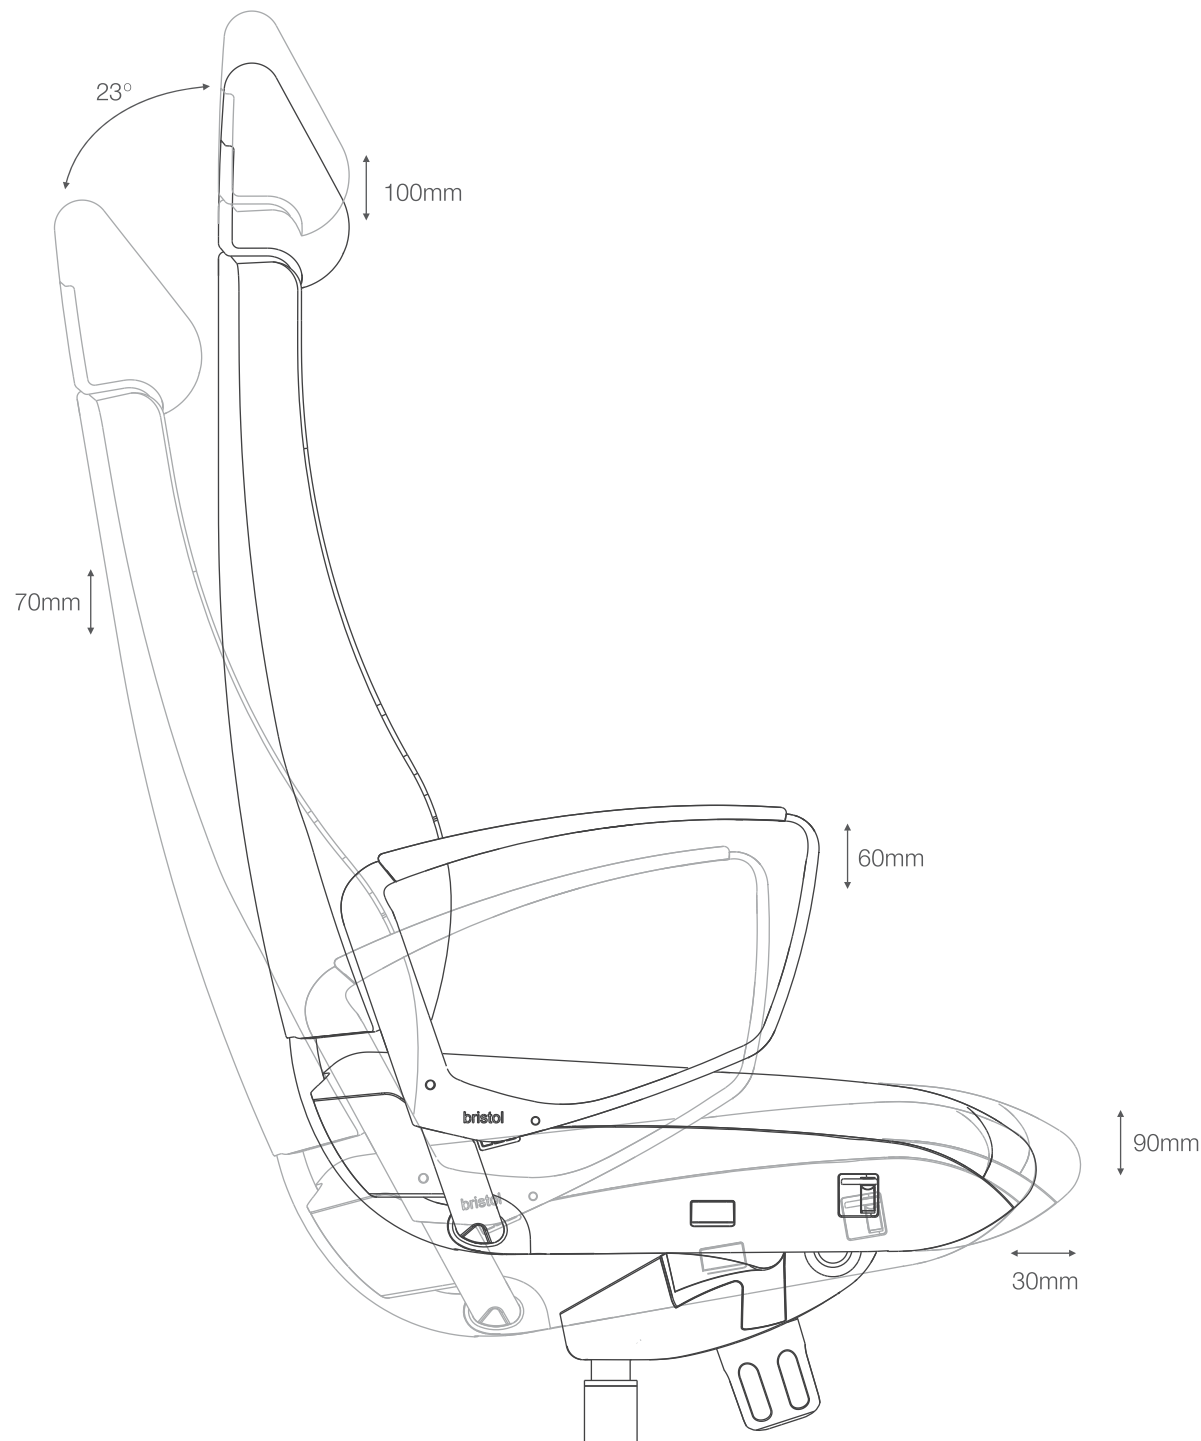

Crafted from thermoplastic polymer and acrylic, the smooth high-gloss black finish of the backrest and seat shell was achieved through a remarkably precise process of polishing. The end result is so purely and continuously black.

It is indeed the dark side.

Liven excels in its understated design and appealing comfort. It also conforms to international demands for ergonomic adjustment options.

Liven encompass all adjustment features that are available on a fully ergonomic chair. The seat and backrest tilt synchronously in perfect balance with the body's movement. Backrest lumbar can be set higher or lower to support the spine.

Backrest and headrest shell finish in high gloss black or upholstered.

Armrest pad finish in padded upholstered or self-skin polyurethane.

Arm frame finish in chrome plated or polish finish.

Backrest and seat cushion in single-stitched semi-aniline leather

Seat shell finish in high gloss black.

Mechanism cover in black or silver smooth powder coating

5-star aluminium die cast base in chrome plated with castors or glides.

Headrest
Height can be adjusted.

Backrest
Height can be adjusted incrementally by lifting the backrest up with both hands.

Armrest
Height and width can be adjusted.

Seat.
The depth and height of sitting can be adjusted.

An eye for a more discreet approach: arm frame side cover in plush semi-aniline leather.

Luxurious value added: back cover wrapped with plush semi-aniline leather.

The brushed metal finish reflects a modern yet sophisticated feel.

* For Malaysia only

Armrest in padded leather upholstery.

Armrest in moulded polyurethane foam.

Optional 4D Soul armrest in chrome or powder coated finish.

With carefully stitched seams, they accentuates the details and quality that the eyes perceive.

The levers are self-explanatory. Every function is visible, nothing is concealed.

The Liven chair is available in different variants: as an executive chair, a conference chair and as a visitor chair. If the Liven chair is being used as a conference chair in rows, auto-return mechanism with a five-star base with glide is recommended for orderly rows - but then with a fixed seat height.

As for the medium and low back Liven chair, half back shell is available for a more distinctive appeal.

High back. Armrests in moulded polyurethane foam.
Cover in fabric. Arm frame highly polished.
Five-star Talk base with castors.

Medium back. With armrests.
Cover in leather. Arm frame chromed-plated.
Powder-coated cantilever base with glides.

Low back. Without armrests.
Cover in PVC.
Powder-coated cantilever base with glides.

High back. Cover in leather.
Arm frame and five-star Talk base in black chrome finish.

The Liven has been designed as a broad product family for furnishing all areas within a company. The clear, well thought-out concept of individual assemblies allows the same components to be incorporated in different types of chairs. For example, the seat shells of the swivel chairs and the cantilever chairs are identical.

The model groups offer a wide selection of surface finishes, base options and upholstery materials that accentuates the different levels of hierarchy in an organization.
